HOW IT WORKS

Connect a suitable balanced output from your existing mixer board to the broadcast server. A mixer board is not necessary if you are using a wireless microphone.

Listen servers are cloud managed with customizable in-app functions which support welcome messages, videos, sliding banners, pdf documents and supports portable smart iOS and Android devices.

Connect the server to the existing network via ethernet cable

To have extended wifi coverage for the parking lot a high power external grade access point(s) need to be installed. Multiple units may need to be deployed depending on your needs. The buildings internal wifi will also be utilized for the broadcast.

Your members can now download the free Listen Everywhere App from their app store. Once installed on their smart phone or tablet, they can connect to the church's wifi and listen from the comfort and safety of their car. If so equipped the cars audio system can be used to improve audio fidelity.
